

SUPPLIER RFP RESPONSE

Orbit Digital

Synthetic proposal for Agentic RFP Evaluation Mini Project

1. Executive Summary

Orbit Digital has strong supplier experience and references and offers medium pricing. Its main weakness is an insufficiently detailed integration approach and limited technical dependency planning.

2. Understanding of the Requirement

The supplier understands the requirement as the delivery of a secure, maintainable business application with reliable integrations, a controlled implementation process, transparent commercial assumptions, and ongoing operational support.

3. Proposed Solution and Implementation Approach

Orbit proposes a cloud-hosted business platform with standard APIs, configurable workflows, reporting, and managed storage. The proposal states that integrations will be finalized during discovery but does not provide detailed interface patterns, migration steps, or dependency mapping.

4. Timeline, Team and Milestones

11 weeks: discovery 2 weeks; configuration 4 weeks; integration 2 weeks; testing 2 weeks; launch 1 week. Team includes a project manager, solution consultant, developers, and QA resource.

5. Commercial Proposal

Implementation: \$84,000. Annual support: \$20,000. Estimated cloud/third-party costs: \$14,000 annually. Pricing is transparent, with separate optional customization charges.

Price assumptions include supplier implementation effort and recurring support. Taxes and unusual third-party consumption charges may be additional where applicable.

6. Security, Compliance and Risk Controls

Orbit describes encryption, access controls, MFA, backups, security monitoring, and incident escalation. It provides a general privacy statement but limited detail on audit retention, certification status, and formal compliance testing.

The supplier recommends periodic security reviews, controlled access, documented incident handling, and backup verification.

7. Support Model and Relevant Experience

24x7 critical support, named account manager, service reviews, and a structured escalation process. Orbit cites four relevant projects and provides strong reference descriptions.

8. Risks, Dependencies and Open Points

The integration plan is vague. Migration responsibilities, interface specifications, and technical dependency ownership are not sufficiently defined.

9. Supplier Statement

This document is fictional and created solely for evaluation and demonstration. All prices, projects, references, capabilities, and claims are synthetic.
